

THE UPDATING PROCESS FOR 3D CITY MODEL OBJECTS

Commission III
Session: TS02E – 3D Modelling

**Khairul Hafiz Sharkawi,
Edward Eric Duncan**

3D GIS Lab, Faculty of Geoinformation and
Real Estate,
Universiti Teknologi Malaysia

FIG 2014 Congress, Kuala Lumpur

Introduction

- New developments, constructions and renovations are inevitable especially in urban areas.
- Entities such as buildings will change through time
- Keeping track of these development activities is important

Introduction

XXV International Federation of Surveyors
Congress, Kuala Lumpur, Malaysia, 16 – 21
FIG 2014 Congress, Kuala Lumpur

Introduction

- 3D city models represent real cities
- Changes should be tracked and recorded – to keep the 3D city models up-to-date and relevant for analyses

XXV International Federation of Surveyors
Congress, Kuala Lumpur, Malaysia, 16 – 21 June 2014

FIG 2014 Congress, Kuala Lumpur

Introduction

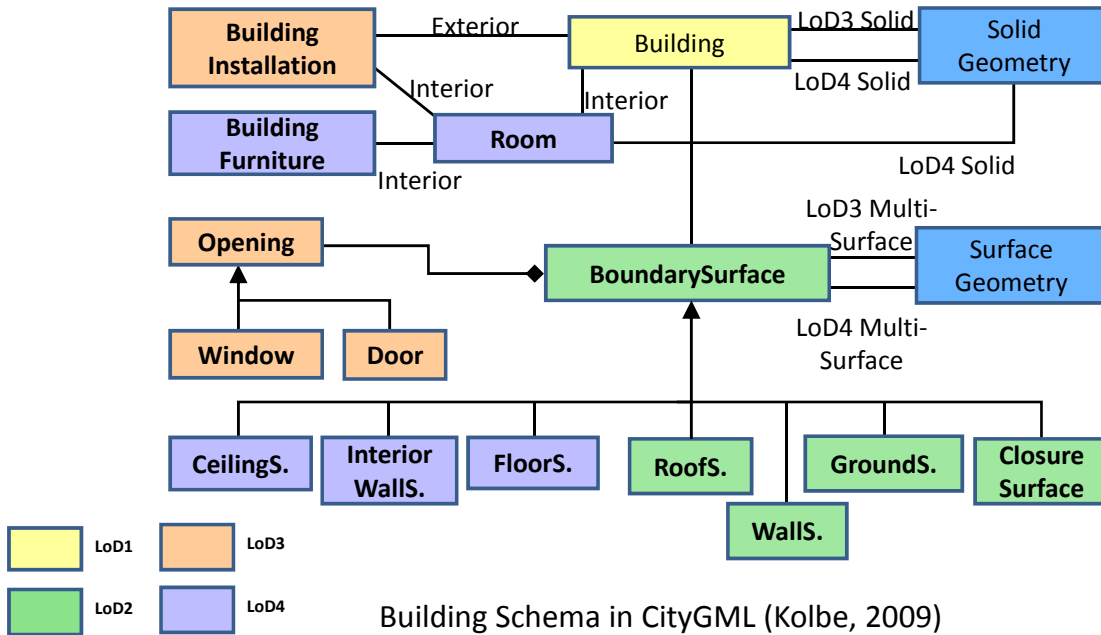

- Detecting and updating the changes are important but replacing the whole existing data will cause loss of valuable information
- Selective updating is needed in order to update the changes while retaining the existing data

CityGML

3D Segmentation

- 3D building is always generated as 1 object in most database/applications
- Limited interpretation of building parts
- Lack of semantic information

XXV International Federation of Surveyors

Congress, Kuala Lumpur, Malaysia, 16 – 21

Detecting Changes

	Current Data	New Data
Original Building		
Segmented Building		
Changes Detected (Shaded)		

The updating process

XXV International Federation of Surveyors
Congress, Kuala Lumpur, Malaysia, 16 – 21

FIG 2014 Congress, Kuala Lumpur

Updating Process

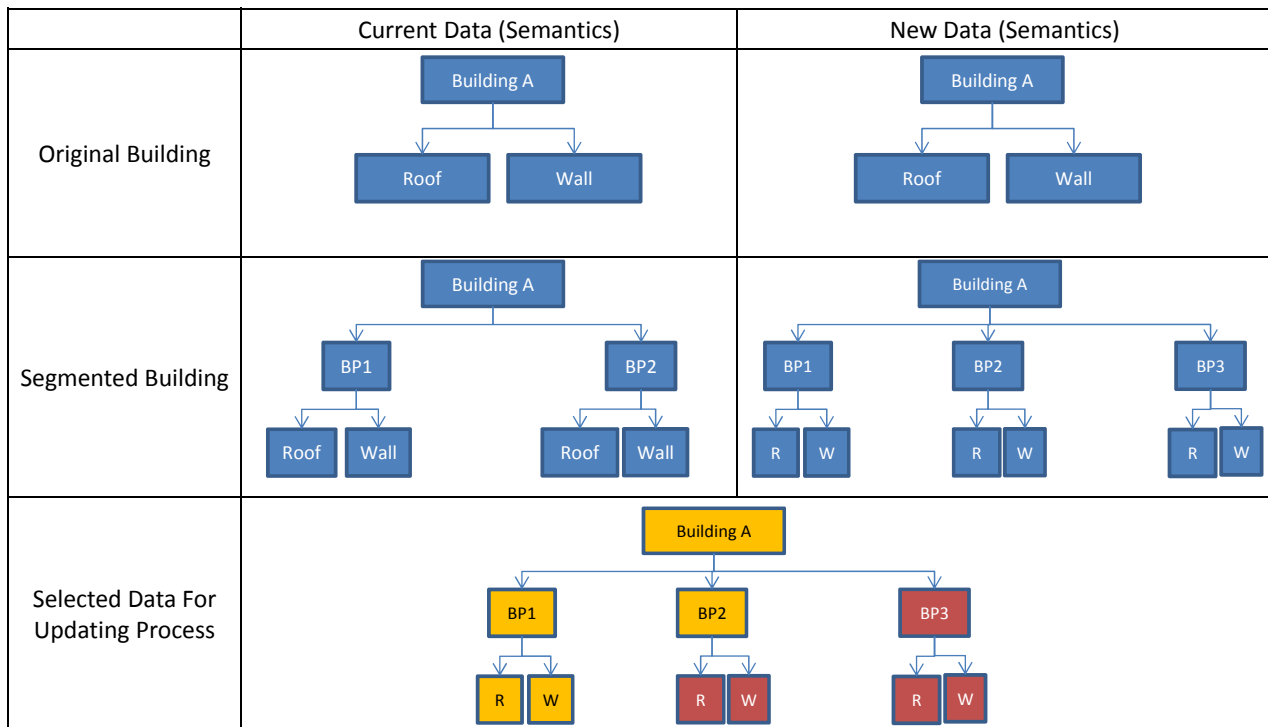

- The change detection process will be done by comparing the new data against the existing data
- Segmentation will allow building parts to be defined and enable changed structures to be localized
- The change detection results will be used for the updating process

XXV International Federation of Surveyors

Congress, Kuala Lumpur, Malaysia, 16 – 21

FIG 2014 Congress, Kuala Lumpur

Updating Process

The updating process

XXV International Federation of Surveyors
Congress, Kuala Lumpur, Malaysia, 16 – 21

FIG 2014 Congress, Kuala Lumpur

Conclusions

- Updating 3D city models can be very difficult especially for large cities.
- Replacing the whole model is easier but the action might cause the loss of data.
- The proposed method should be able to update the 3D building based on the changes that occurred and retain existing information

XXV International Federation of Surveyors

Congress, Kuala Lumpur, Malaysia, 16 – 21

FIG 2014 Congress, Kuala Lumpur

Conclusions

- The proposed segmentation technique for buildings in 3D city model should be able to add more information on the building, semantically and geometrically
- For future work, integration of the proposed method with façade detection method should enable the support for higher LoD (LoD3) models.
